

IMPORTANT

1. When a large solid black (100%K) area is required on a 4 color process job, we recommend to build the black in **SUPER BLACK** which has a mix of **C 40, M 30, Y 30, K 100**. It will make the black denser onto an image if you want your background image not to show through.
2. Please refer to the SUPER BLACK colour combination found in EXCARD's CMYK Colour Reference Manual.
